Final Reflection -
Dustin Robertson

- **What is something you would like to see in this class that is not covered?**

Going into this class it was hard to distinguish what was going to be different than the previous courses so my expectations were relatively low. However I would like to delve more deeply into the different frameworks that are out there, I know there are other courses that target them more specifically but I'm still very curious.

- **What is something that we covered in this class that you would like to know more about?**

I was very interested in the jquery portions of the course and would have loved to learn more in the area. It seems there's an endless amount of potential for that and I know most of it will come from practice and research on my end.

- **What can I do to make the course better for the next semester?**

One thing I did not do was leave meaningful feedback or questions on the udemy course tutorials. When I did have a question, I sought it out on my own through Google and other online resources. If I were to have asked directly or posted a question publicly perhaps it would have helped future students as well.
